Mobile: +5527988272334

I am a veterinarian, graduated from the Federal University of Viçosa in 1995, completed a master's degree in Animal Biology at the Federal University of Espírito Santo in 2005 and a doctorate in ecosystem ecology at Universidade Vila Velha in 2015. I taught at Universidade Vila Velha for 21 years, (1999-2021), also working on the planning and management of the veterinary medicine course. Since 2000 I have been dedicated to research projects and wildlife conservation, having worked with endangered species such as sea turtles, alligators since 2014 and since 2016 with birds. I have experience with biomonitoring, wildlife health assessment, ecotoxicology, and conservation project management planning. In 2004 I founded the Marcos Daniel Institute, of which I have been president since 2006. Today I am fully dedicated to biodiversity conservation, coordinating the Cherry-throated Conservation Program and the Chelonia mydas Project, and assist other projects from IMD.
